Welcome to the Vagrant Setup Wizard

The Setup Wizard allows you to change the way Vagrant features are installed on your computer or to remove it from your computer. Click Next to continue or Cancel to exit the Setup Wizard.

Vagrant 安装成功，并安装插件

Vagrant 安装成功

```
PS D:\vagrant> vagrant --version  
Vagrant 2.2.0
```

使用vagrant plugin install vagrant-cachier命令安装插件

```
PS D:\vagrant> vagrant plugin install vagrant-cachier  
Installing the 'vagrant-cachier' plugin. This can take a few minutes...  
Fetching: vagrant-cachier-1.2.1.gem (100%)  
Installed the plugin 'vagrant-cachier (1.2.1)'!
```

安装Virtual Box（直接用老师给的）

VirtualBox

Download VirtualBox (Old Builds): VirtualBox 5.2

The Extension Packs in this section are released under the [VirtualBox Personal Use and Evaluation License](#). All other binaries are released under the terms of the GPL version 2. By downloading, you agree to the terms and conditions of the respective license.

名称	修改日期	类型	大小
.vagrant	2020/10/7 16:37	文件夹	
trusty-server-cloudimg-amd64-vagrant-dis...	2020/10/7 16:16	BOX 文件	438,460 KB
Vagrantfile	2020/10/7 16:22	文件	4 KB

下载两个文件到
D:/vagrant目录下

修改Vagrantfile， 使用vagrant init命令进行初始化，然后使用vagrant up命令开启虚拟机

```
PS D:\vagrant> vagrant up
Bringing machine 'controller' up with 'virtualbox' provider...
Bringing machine 'network' up with 'virtualbox' provider...
Bringing machine 'compute' up with 'virtualbox' provider...
==> controller: Box 'trusty64' could not be found. Attempting to find and install...
    controller: Box Provider: virtualbox
    controller: Box Version: >= 0
==> controller: Box file was not detected as metadata. Adding it directly...
==> controller: Adding box 'trusty64' (v0) for provider: virtualbox
    controller: Unpacking necessary files from: file:///D:/vagrant/trusty-server-cloudimg-amd64-vagrant-disk1.box
    controller:
==> controller: Successfully added box 'trusty64' (v0) for 'virtualbox'!
==> controller: Importing base box 'trusty64'...
==> controller: Matching MAC address for NAT networking...
==> controller: Setting the name of the VM: vagrant_controller_1602059925313_87689
==> controller: Clearing any previously set forwarded ports...
Vagrant is currently configured to create VirtualBox synced folders with
the 'SharedFoldersEnableSymlinksCreate' option enabled. If the Vagrant
guest is not trusted, you may want to disable this option. For more
information on this option, please refer to the VirtualBox manual:
```

<https://www.virtualbox.org/manual/ch04.html#sharedfolders>

This option can be disabled globally with an environment variable:

```
compute: SSH address: 127.0.0.1:2801
compute: SSH username: vagrant
compute: SSH auth method: private key
compute:
compute: Vagrant insecure key detected. Vagrant will automatically replace
compute: this with a newly generated keypair for better security.
compute:
compute: Inserting generated public key within guest...
compute: Removing insecure key from the guest if it's present...
compute: Key inserted! Disconnecting and reconnecting using new SSH key...
==> compute: Machine booted and ready!
==> compute: Checking for guest additions in VM...
    compute: The guest additions on this VM do not match the installed version of
    compute: VirtualBox! In most cases this is fine, but in rare cases it can
    compute: prevent things such as shared folders from working properly. If you see
    compute: shared folder errors, please make sure the guest additions within the
    compute: virtual machine match the version of VirtualBox you have installed on
    compute: your host and reload your VM.
    compute:
    compute: Guest Additions Version: 4.3.40
    compute: VirtualBox Version: 5.2
==> compute: Setting hostname...
==> compute: Configuring and enabling network interfaces...
==> compute: Mounting shared folders...
    compute: /vagrant => D:/vagrant
```

```
PS D:\vagrant> vagrant --version
```

```
Vagrant 2.2.0
```

最后就看到有三个
machine
